一、写作 (Writing)

试题要求

论述过度依赖 AI 对创造力的危害。

参考范文

As AI tools become increasingly popular, over-dependence on them is harming human creativity in critical ways. This problem mainly stems from reduced independent thinking and the narrowing of creative diversity.

First, relying too much on AI discourages people from solving problems independently. For instance, students who use AI to write essays miss the opportunity to engage in topic analysis and idea organization. Without consistent practice, their ability to generate original ideas gradually weakens. Second, AI tends to provide standardized solutions, whereas true creativity thrives on novelty and uniqueness. Lastly, AI offers instant results, but creativity typically requires time and patience.

To address this issue, we should view AI as a complementary tool rather than a substitute for human thinking. By maintaining the habit of independent reflection and using AI to refine our ideas, we can ensure that our creativity remains intact.
